

MS Implant

The MS Implant System is tailored for patients with limited bone width or edentulous ridges. Its streamlined geometry and strong design allow for secure placement in narrow anterior areas as well as effective support for implant-retained dentures.

FOR NARROW RIDGES

Engineered for safe placement in anatomically tight spaces.

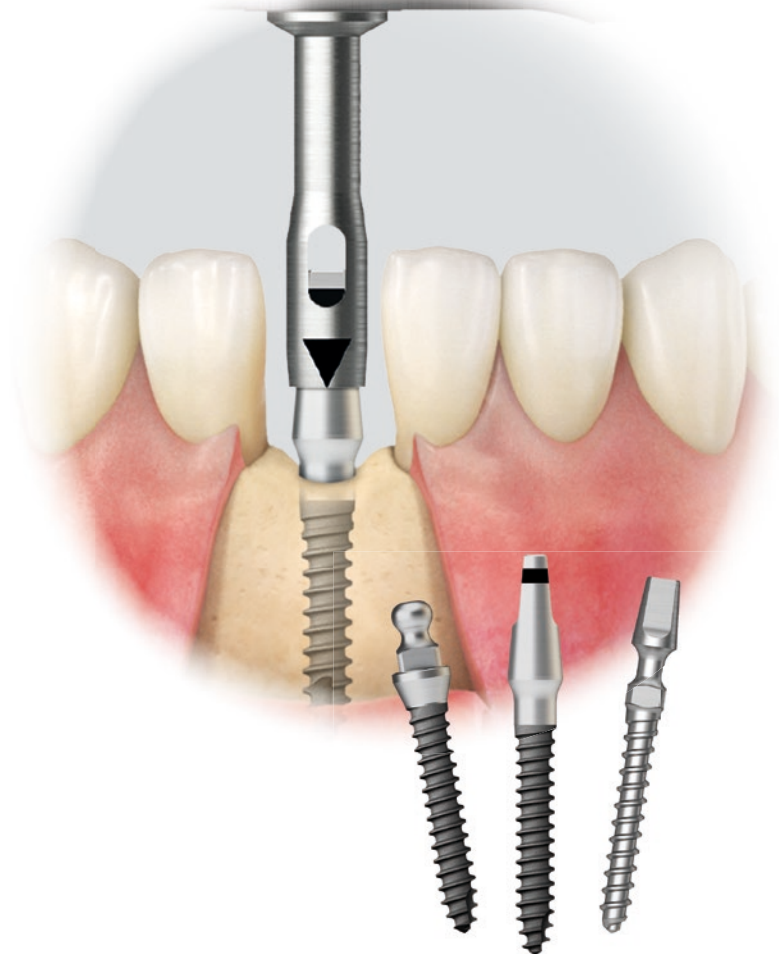

OPTIMIZED FOR DENTURE SUPPORT

Provides stability and retention for removable prostheses.

PROVISIONAL IMPLANT OPTION

Allows immediate temporary restorations with stable soft tissue management.
