

# OssCover

OssCover is a resorbable collagen membrane developed for guided bone regeneration in implant and periodontal surgery. Made from highly purified collagen without chemical crosslinks, it provides a natural barrier function while supporting tissue healing.

## BETTER HANDLING & STABILITY

Rapid hydration and easy adaptation to complex defect shapes with a unique elasticity and suture pull-out resistance for reliable fixation.

## SUPERIOR TISSUE INTEGRATION

Porous structure enhances vascularization and healing.

## CLINICALLY RELIABLE

Reduces risk of complications with biocompatible, non-crosslinked collagen.

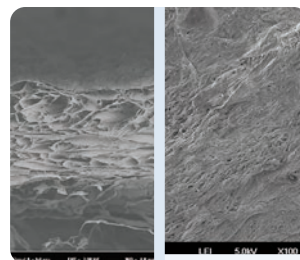

## Product Details

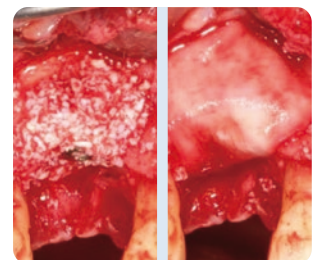

Excellent adhesion
